

# pH Imbalance

A pH imbalance in your water supply can result in unsightly blue stains on baths and sinks and in extreme cases can cause corrosion to cylinders, pipes appliance and fittings. It is also noticeably 'harder' on your skin, hair and clothes.

## Problems Caused by pH Imbalance

- Blue stains in plumbing appliances and on laundry
- Corroded radiators, copper cylinders and piping
- Wear on tiles, sinks and other fixtures
- Hard on skin and hair

## Solution: pH Neutraliser

The installation of a pH neutraliser allows you to balance the ph in your water. The neutraliser splits your water supply and treats some of the supply which is then mixed with the untreated supply to raise the ph level to 7 which renders it non-corrosive. The ph level can easily be monitored and changed if necessary by adjusting the amounts of treated and untreated water that are mixed before reaching your household.

## Benefits of Iron pH Neautraliser

- Purified, clean, healthy water
- 'Softer' water, with noticeable differences on skin, hair and clothes

## Perfect Water Systems Limited

Ballysally Business Park, Railway Road, Charleville, Co Cork.
